

True North MSP — Free Cybersecurity Checklist

1. Device Security

- All company devices are protected with strong passwords or biometrics
- Devices automatically lock after 5-10 minutes of inactivity
- Antivirus/anti-malware software is installed and regularly updated
- Operating systems and software are set to auto-update

2. Network Security

- Wi-Fi networks are encrypted (WPA2 or WPA3)
- Guest Wi-Fi is separate from internal company network
- Firewalls are enabled on all devices and routers
- Remote access (VPN) is secured with MFA

3. Account & Access Controls

- Multi-factor authentication (MFA) is enabled for all critical apps
- User permissions follow the principle of least privilege
- Accounts are immediately disabled upon employee termination
- Admin credentials are stored securely and monitored

4. Email Security

- Employees are trained to recognize phishing emails
- Email filtering and spam detection are active
- External emails are flagged with a warning banner
- Email backups are performed regularly

5. Data Protection & Backup

- Regular backups are performed and tested
- Sensitive data is encrypted at rest and in transit
- File sharing is controlled and logged
- A disaster recovery plan is documented

6. Employee Awareness

- Employees have completed cybersecurity training in the last 12 months
- There is a clear and enforced Acceptable Use Policy (AUP)
- Staff are aware of how to report security incidents
- A "Cybersecurity Champion" is assigned internally

7. Compliance & Auditing

- All cybersecurity policies are up to date and reviewed annually
- Access logs and changes are audited regularly
- You comply with applicable data protection laws (e.g., PIPEDA, GDPR)

A cybersecurity insurance policy is in place
